## Find the variable

Highlight the variable in the given equations.

variable

$$5+x=11$$

$$15 - c = 5$$

$$(4)(3) = s$$

# Hints for solving these problems

## Find the variable

#### Hint #1

A variable is often a letter, like x, y, or any other letter, and is used to represent an unknown quantity.

#### Hint #2

+ or - are operators, while = is a relation.

### Answers and detailed answer explanations for these problems

## Find the variable

Answer key: variable: 3, 8, 14

You can recognize a variable as it is usually a letter (you can also use symbols like a star or a smiley face, but maybe they aren't always the most convenient to use). Looking at our given equations, we can see that:

- x, y or a, b, c are variables.
- 10, 5 are numbers.
- + or are operators.
- ullet = is a relation.

So let's examine the following equations:

• 
$$5 + x = 11$$

Here the variable is given by x.

• 
$$15 - c = 5$$

The variable c stands for the unknown number of  ${\bf c}$ oyotes.

• 
$$(4)(3) = s$$

s is the variable for the unknown number of rattle snakes.
